EFFECTIVE IMMEDIATELY
Public Health Sudbury & Districts
(Health Protection Division)

**Has now LIFTED the
DRINKING WATER ADVISORY**

which was issued on July 4, 2026 as the laboratory results of water samples collected on July 4, 2026 and July 5, 2026 are reported as satisfactory.

Please refer to the fact sheet from Public Health Sudbury & Districts attached to this notice regarding
**WHAT TO DO ONCE THE DRINKING WATER
ADVISORY HAS BEEN LIFTED**

Thank you for your co-operation & patience during
this advisory

The Municipality of Killarney
July 6, 2026

What should you do when the drinking water advisory has been lifted?

If you use the municipal water supply, you should run each of your cold water taps for at least 5 minutes or until the water runs clear. Large-volume users (for example, hospitals, schools) may need to run cold water taps for a longer period of time on first use. To get rid of sediment, screens should be removed, rinsed and replaced.

Should you expect anything different with your water after a drinking water advisory has been lifted?

It is possible that you might detect a slight taste of chlorine during the first use. The municipality may have been using a higher level of chlorination.

What if you see or taste something unusual in your water after a drinking water advisory has been lifted?

If you have any concerns, call your local municipal office.

Do you need to test your water if you are on a municipal water supply after a drinking water advisory has been lifted?

No, you do not need to have your water tested if you are on a municipal water supply. Do not take municipal water samples to Public Health for testing. The municipal water supply is tested and monitored regularly by the municipality.
